

St. John's Island National Marine Laboratory Presents:

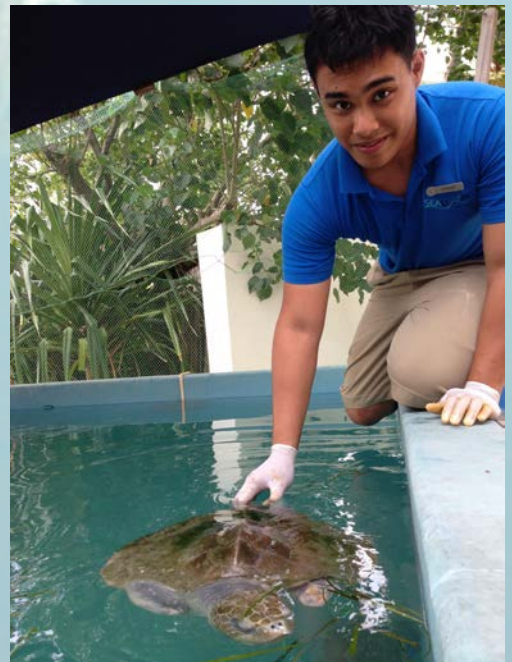

Sea Turtle 101: Introduction to Sea Turtle Biology, Ecology, and Conservation.

Seminar Room.

Thursday 8th February 2018, 3pm.

Sea turtles are a charismatic marine megafauna with a complicated biology and an uncertain future.

Join Rushan as he provides new research that may change what was previously known, and what their future holds.

Rushan is currently undertaking his honours in Murdoch University using airborne laser scanning to characterise beach topography used for nest site selection by flatback sea turtles. He has previously worked and volunteered in projects with five of the seven species of sea turtles in Maldives, Malaysia, and Australia, primarily with captive rear and release projects, hatchery management, and nest site selection.
